DETAILED ACTION

Summary

On May 2, 2006, an Office Action was sent to the Applicant rejecting claims 34-79, 83-88, and 91-111. On December 5, 2006, the Applicant responded by amending claims 34, 37, 68-69, 71-79, 83-88, 91-103, and 105 and canceling claims 36 and 70.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 34-35, 37-69, 83-88, 91-105, and 110-111 are rejected under 35 U.S.C. 102(e) as being anticipated by Hillson (6,118,860).

Hillson discloses a method and corresponding system for communication through an automated teller machine or kiosk comprising providing an ATM or Kiosk, the ATM or Kiosk having at least one transaction device type, with the capabilities of transaction devices within the transaction device type being non-identical between more than one ATM or Kiosk across a network of ATMs or Kiosks, said ATM or Kiosk being controlled by at least one software application and an operating system, both of which are installed in the ATM or Kiosk, wherein the at least one software application interacts with said transaction device type through a programming interface of middleware software

Art Unit: 3691

comprising transaction wherein the transaction services provided by the transaction objects depend on the capabilities of the transaction device type, but the programming interface of the transaction objects is independent of the capabilities of the transaction device (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); transaction machine further comprises a data communications interface and wherein said transaction machine is adapted to communicate over said data communications interface (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); transaction objects are controls for performing standardized device functions (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); transaction machine further comprises a customizable user interface (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); transaction objects are independent of said user interface (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); a plurality of controls, at least one of which comprises a capabilities interface (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); the capabilities interface can communicate the capabilities of the control (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); applications, objects and controls are concurrently operable (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); controls are constructed with an event generating capability and wherein a said controls are

Art Unit: 3691

operable in a selectable mode in which said events are queued up and delivered to an application on demand (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); middleware software is adapted to provide service in accordance with at least one software standard for interacting with different hardware systems (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); all errors and transgressions are asserted by the middleware software (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); the step of the middleware software writing trace data to memory and then copies it to disk only when the transaction machine is idle (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); a web browser (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 to col.9, line 15; and col.10, lines 40-50); at least one software application is operable from within said web browser environment (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); web browser provides support for software distribution (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 to ocol.9, line 15; and col.10, lines 40-50); a web browser frame containing at least one device control operable to detect events which must be responded to upon occurrence (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); web browser is adapted to communicate with conventional web sites to be displayed by the computer-based transaction machine (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10,

Art Unit: 3691

lines 40-50); the computer-based transaction machine is adapted to allow the software applications and middleware to be altered across a network by an authority (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); the transaction machine is adapted to communicate status information to a remote station (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); at least one of said transaction objects provide, separately or in combination with other transaction objects and controls, encapsulation of software logic required for performing at least a portion of a transaction (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15, and col.10, lines 40-50); at least one of said controls is a device control, providing abstraction of details of a device controlled by said device control (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); step of creating a separate thread for each of a plurality of controls (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 to col.9, line 15; and col.10, lines 40-50); the step of enabling said application program to communicate over said communication interface through a control (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); middleware software provides generic error handlers (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); configuring a plurality of transaction machines, and wherein configuration data for said step of configuring is centrally held in a distribution (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-

Art Unit: 3691

50); constructing said user interface using common web authoring tools (col.2, line 25 to col.4. line 2: col.4. line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); the operating system is Microsoft Windows NT (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); ATM or kiosk comprising middleware software comprising transaction objects, wherein transaction services provided by the transaction objects depend on the capabilities of the transaction device type but the programming interface of the transaction object is independent of the capabilities of the transaction device (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); more networking means and one or more application servers (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); an extranet formed by combining a plurality of networks o computer-based transaction machines to the above claim (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); an extranet according to the above claim provided with a security mechanism which limits the hardware functionality available to individual software applications (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); operating by a first organization a computer based transaction machine controlled by at least one software application to affect a transaction service, wherein said software application is provided by a second organization, wherein said software application provides an transaction type different than the transaction type associated with said first organization (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t

Art Unit: 3691

ocol.9, line 15, and col.10, lines 40-50); at least one software standard is selected from a group consisting of WOSA XFS, OPOS, OFX, TOPEND, ActiveX, Javabeans, SNMP or at least one of said controls implements an OFX interface or a portion thereof, to facilitate communication with an OFX server (col.10, lines 10-25); middleware software comprising a plurality of COM components having a scriptable ActiveX interface (col.10, lines 10-25); middleware software comprising a plurality of Javabeans components having scriptable interfaces (col.10, lines 10-25); middleware software allows or disallows access to particular web sites according to a rule database (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); middleware software is adapted to customize time-out of the display of individual internet web sites (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); creating an event thread associated with each transaction service for insuring that device states persist from one application page to another (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50); and encapsulating essential software logic of the transaction services so that an associated user interface is freely defined (col.2, line 25 to col.4, line 2; col.4, line 25 to col.5, line 53; col.7, line 25 t ocol.9, line 15; and col.10, lines 40-50).

Claims 106-109 are rejected under 35 U.S.C. 102(e) as being anticipated by Eaton (6,003,019), as set forth in the previous office action.

Response to Arguments

Art Unit: 3691

Applicant's arguments with respect to claims 34-35, 37-69, 83-88, 91-105, and 110-111 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's arguments filed December 5, 2006 have been fully considered but they are not persuasive. With regard to claims 106-109, the Applicant argues that Eaton does not disclose the middleware layer is an ATM or kiosk or provides transaction services depending upon the particular capabilities of the transaction device type, through a programming interface independent of the capabilities of the transaction device. In response, Eaton clearly discloses an automated teller machine that provides transaction services.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
